## ENTERGROUP THUNDERBIRD POP SETUP

In this tutorial you will learn how to setup Thunderbird with POP using EnterGroup's Email.

Thunderbird POP Setup

Open Mozilla Thunderbird and go to New -> Account.

Select Email account and click Next.

Type your name as you want it to appear on outgoing emails.
Then, type your email address in the field labeled Email Address.
Click Next to continue.

Select the radio button labeled POP.
Enter pop.mailanyone.net in the field labeled Incoming Server.
Enter smtp.mailanyone.net in the field labeled Outgoing Server.

Click Next to continue.

Note: The field Outgoing Server is only visible during the setup of Mozilla Thunderbird's first email account. If you already have an email account set up, you will not see this field.

The next screen, User Names, should already be filled out correctly. Confirm that both fields match your EnterGroup username, and then click Next to continue. Important: Your user names MUST be the entire email address.

Note: If you have already set up an email account, the Outgoing Server field will not appear.

Click Next on the Account Name page to accept the default Account Name.
Click Finish.

Immediately after clicking finish, you will be prompted for your password. If you'd like to save your password, make sure Use Password Manager to remember this password is checked before clicking on OK to continue.

Thunderbird is now setup to check your EnterGroup account.
